Objective

I specialize in developing Internet of Things (IoT) and smart technology solutions, with a strong foundation in Python and backend web development. My work focuses on designing and implementing scalable, high-performance systems that efficiently handle real-time data and seamless connectivity. I have hands-on experience building reliable web applications and services for connected environments, with an emphasis on performance, security, and maintainability. I thrive in dynamic environments where creating robust, production-ready solutions and optimizing system efficiency are key priorities.

Skills

Programming: Python, C, Dart
AI Skills: Generative AI, LLMs, NLP Basics, OpenAI APIs
IoT & Embedded: Node MCU, ESP32, Arduino, IoT Sensors
Backend: Fast API, REST APIs
Databases: MySQL, MongoDB
Tools: Git, Firebase, VS Code, Arduino IDE

Projects

Personal Portfolio Website – [GitHub](#)

- Built and deployed an interactive 3D portfolio using React, TypeScript & Vite on GitHub Pages.
- Implemented GSAP scroll animations and Three.js WebGL rendering for a premium user experience.
- Showcased full-stack expertise across Flutter, Node.js, FastAPI, Firebase, MongoDB.
- Integrated Vercel Analytics for post-deployment performance and traffic monitoring.

LexAssist AI — Personal Finance Manager – [GitHub](#)

- Built AI-powered legal document analyzer using **FastAPI** backend and **Streamlit** UI.
- Implemented **NLP pipeline** with HuggingFace Transformers & spaCy for summarization, NER, and risk scoring.
- Developed **PDF extraction engine** to parse and preprocess legal contracts using PyMuPDF/PyPDF2.
- Designed **RESTful APIs** with Pydantic schema validation for document upload and analysis.

E-Learning Platform – [GitHub](#)

- Developed a full-stack MERN e-Learning platform with **3 user roles** (Student, Teacher, Admin) and secure **JWT + bcrypt** authentication with role-based access control.
- Built a **course management system** where teachers create courses, admin approves them.
- Integrated **live video conferencing** (Google Meet-like), real-time in-platform messaging, and **Nodemailer** for automated email notifications.
- Designed **RESTful APIs** with Joi validation, managed cloud media via **Cloudinary**.

Educations

Raj Kumar Goel Institute of Technology

Expected - 2027

B.Tech in Computer Science Engineering (Internet of Things), GPA: 7.34
